## 15 Star Trek

Due out at the end of this year, *Star Trek* promises graphics the like of which you've never seen before. Going where no magazine has gone before, we take a look at a development version of the game.

## ◀ SOFTWARE

## 19 PC Freeware

The PC compatibles may be cheap these days, and software may be coming down in price, but much of it

is still very expensive. Why not consider public domain programs, free of charge bar an initial registration fee? Marcus Rowland looks at the best of what's available.

## HARDWARE ▶

The Euramas Joystick

## 22 Disciple

The ultimate interface for the Spectrum? Connect everything you've ever wanted to – and probably more – with Rocksoft's Disciple.

## 22 Joysticks

Two more from Euramas go for the

Popular test-throw, including the rather strange-looking Joystick.

## 23 Omnireader

Ever wished your computer could read print-outs, without the bother of messing on-screen? The Omnireader provides a step in this direction.

## ◀ PROGRAMMING

## 24 Amstrad PCWs

Keep your names and addresses tidy with this card index database.

## 25 QL

It takes All-Sorts – setting routines for your QL.

## 26 Commodore 64

Testing your joystick – plus advice on joystick port programming.

## 26 Spectrum

All the precision and tension of Championship Bowls.

## 28 BBC

Counting the pennies with D Lester's spreadsheet.

## 31 Bytes and Pieces

Where to submit articles: Articles which are submitted for publication should not be more than 2000 words long. The articles, and any accompanying programs, should be original & be sending the use of copyright is made. Programs can be other magazines and submit them here – as please do not be recycled. We cannot guarantee to return your programs – so please do not send your only copy. Manuscripts/Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make such programs work.

# Amstrad: a Yen to raise prices

More money for value...

AMSTRAD has celebrated its 300,000th PC order with a price increase averaging 13 per cent on the range. The new prices range from £308 for the monochrome single floppy machine to £1,286 for the colour machine with 20Mb hard disc.

The price was technically due to come into effect until January, but as orders placed now won't be delivered until after that it's unlikely that anybody ordering now will be able to get a machine at the old price.

Amstrad puts the price rises partly down to the strength of the Yen, which

has forced the cost of its Japanese components up by 25 per cent. Most of the other Amstrad machines have not been increased, however. A spokesman suggested that this was because the components were different.

Japanese sourced components are, however, unlikely to make up much of the total production cost of the machines, as Amstrad manufactures in Korea and uses components from a variety of countries in all its machines. The main Japanese input in the PC will, therefore, be the more complex of the chips,

and possibly some disc drives. The latest tech circuitry and raw materials will generally come from countries like Taiwan, Korea and Malaysia.

Demand was, however, another factor in the decision to raise prices. Advance orders have already exceeded

Amstrad's predictions for sales this year, but have been more heavily loaded towards the hard disc machines than the company expected, and have almost entirely halted sales of the PC16s. The price rise, therefore, has the effect of taking some of the heat off the PC16.

## Apple's new UK show

A couple of weeks ago I wrote, in a preview of Apple's new i805, that the UK company was looking at interactive compared to the American parent.

I take it back.

The change of heart has been brought about by the AppleWorld exhibition and

conference in London last week.

There was more of the claustrophobic or rugby scrum usually associated with computer fairs, instead, as you'd expect from Apple, the show was cool and very slick.

Star of the show was the i805 running some very impressive sound and graphics demos.

But the bulk of the exhibitors were supporting the Mac. Arranged in four sections covering education, business, communications and desktop publishing, the show saw the benefits of a couple of new products.

First was Microsoft Works,

an integrated software package in direct competition with Lotus's Jet, offering word processor, spreadsheet, graphics, database and covers for £250.

The second launch was of Intellinet-Two's first Mac product, a version of their file protocol.

Other interesting stuff included add-on screens giving 1024 x 1024 resolution, colour laser printers, and the sleeker computer printer, a Linomat 100, giving a resolution of more than 1,000 dots per inch.

Not the best of stuff that most of us can afford, but we can dream, can't we?

Peter Westbrook

## Atari repays development grant

ATARI has repaid grants worth £2.6 million to the Irish Industrial Development Agency after its failure to complete work on a computer factory in Limerick. The factory was originally planned when Atari was owned by Warner Brothers.

Work was abandoned on the factory following Jack Tramiel's takeover two years ago. A firm currently producing most of its revenue in Taiwan, although Tramiel has in the past expressed his interest in manufacturing in the US.

## Dedicated games

CDI Software is getting into the hardware market, and is to sell a range of hand-held and table-top games machines from Systems. The range includes dedicated chess and bridge machines, and also extends to draughts, backgammon, Reversi and Four-in-a-Line. Prices start at £18.95 and go up to £199.95 for the TurboStar chess machine.

Due to the Popular printer clogging out at the last minute, the last 13 lines of Ken Smith's Miss program were omitted when it was published.

So, here they are below. Also, you can still obtain a copy of the game direct from Ken.

# Trouble for Tandy's PC

TANDY's new out-of-the-box PC, the 1000EX, has run into compatibility problems. The machine does run most industry standard applications programs, but its attitude in the games market is not so clear cut, and unfortunately for Tandy it won't run one of the games Tandy intends to sell alongside it.

The problem with the game, *Master*, seems to relate to the Tandy's non-standard keyboard. *Master* will load into the machine, which is probably why it goes through Tandy's checking procedure, but as you can't use the cursor keys you can't get past the second screen.

Other games are similarly difficult. *Outblaster's Jet* does work after some tweaking.

son, but instead of the three-dimensional being the plus and minus keys as normal they're cursor right and cursor down. Microprose's *P-15 Star* Fighter has a nasty problem with the toggle between first and rear view (and you're done in once it begins doing it) while *Boulder Dash* and *Boulder Dash II* again have cursor problems.

Some of these games will be playable with a joystick, as unlike the Amstrad PC the Tandy has a PC standard joystick port, and therefore uses if the keyboard won't work the joystick should.

Tandy is meanwhile supplying Activision with a 1000EX in an attempt to identify the problem with *Master*.

The Tandy 1000EX

## British games tilt at French awards

BRITISH software has been winning European awards recently - *Police Software's* *Cavalier* took the 88 award for the best game of the year. It is the leading French games magazine, and its readers are obviously cautious here: last year the accolade for the best computer arcade-adventure went to *Cavalier II*.

*Graphic's* *May of the Year* also went to one of the 25 awards for the best Amstrad game of the year, so did US company Microprose's *Star Soldier*, available in the UK through US Gold.

It also awarded a 'Golden Star' to *Star Soldier's* French, the highly acclaimed graphic adventure published by *Reinforce*, for the quality of its graphics. The *Play* has also gained adventure awards from the German magazines *Happy Computer*, and *64'er*.

## Software Hotlines

**English Software**, well-known mainly as a company still producing titles specifically for the Amstrad 8-bits, turns its attention to the Amstrad CPCs and the ST for its next two releases.

*Q-Ball*, for the ST, may sound like a Snooker game, but not if you talk to English boss Philip Moore. "Well, as it's not exactly Pool or Snooker, but you'll have all the balls on screen - they'll all move independently - and you'll be able to steer it from any angle."

Made of that what you will - a cross between Pool and a Newton's Cradle - and watch this space for further clarification.

On the Amstrad CPCs English is converting *StarSoldier*, the racing game with a wilderness survival touch. It should be out in a week or so at £9.95 (suggested), £14.95 (list). Also, *Popular* will be running an *StarSoldier* competition next week so keep your eyes peeled.

MicroProse's latest, *Outblaster*, a shoot-em-up, gets a thorough play test in the final of *MicroProse's* National Computer Games Championship, being held this week at the Savoy Ball in London.

More championships from CDS, the publisher of *Galaxy Chess*, which is sponsoring a Chess competition under the auspices of the British Chess Federation, Junior Division, and BBC's *Chess* service. Contestants are be-

ing picked through secondary schools.

The big surprise about *Amstrad's* *StarSoldier*, a fast action shoot-em-up, (has any company ever advertised a slow action shoot-em-up?) is that it's got nothing to do with *Starship* Jeff Minter. Coming out on *Amstrad's* *Rescue* label next month, it mainly comprises blasting everything in sight to bits in a state of suppressed panic.

It is now a well known fact that *Geoff Crammond's* *Starship* (to be released on BBC II and Commodore 64 very soon - full review within these pages next week) has fifty alien levels (20 then - 10,000) and each can only be accessed via a secret eight figure code. Now, *Geoff* is still has developed some more system for uncracking these codes, so the only way into the various levels will be by playing the thing from level zero, and considering it took me a weekend to get to level 253, this is no pushover.

Heading into the program will be useless, says a *Flamingo* spokesperson, because even if someone gets through, there are a totally false set of numbers, just to put you off! Will the *Starship* code ever be broken? *Flamingo* someone obtains - "no way," it says. Well I give it three weeks, Max.

Starship

# Beyond is brought from the cold

BEYOND's career as a separate entity is now over, according to BT Telecomput head Elnora Williams. In the past few months it has lost publisher Popcorn Ltd and marketing manager Mark Pearson, and rather than replace these two Williams has taken the opportunity to merge it more closely into BT's mid-range operation, which now consists of Firstaid Gold, Odin and Beyond.

These three will now be run as separate labels by a more

centralised production team, with the different labels being used to differentiate between different kinds of software, and Beyond in particular concentrating on "special adventures and learning tools." Significantly Williams refers to these as the label's existing specialisations, although Star Trek is actually only the second such deal Beyond has been involved in. The first was last year's disastrous *Spartan* game.

Williams feels that more

"We've orders to return to Federation territory captain."

centralisation will do good for the BT labels, making them more flexible and easier to run. "In this business it's a no longer easy to be a small unit, even with a big one."

The merger should go some way to decrease friction within Telecomput's,

where staff have spoken of resentment at the way the label sometimes seemed to be run. Williams says that the reorganisation had been talked about before the departure of Lee and Pearson, but confirms that their leaving had an influence.

## UK denies piracy claim

UK Software, which last week was at the centre of one separate piracy storm, has led the blame at the door of the programmer in both cases. Ian Sinclair of UK says that its Commodore 64 is similar to Mastertronic's *Spellbound*, but says that he released the game without being aware of this.

"We hadn't seen *Spellbound* until Mastertronic contacted us, but within half an hour we'd withdrawn it from sale." Copies of the game are now being destroyed as they come back to UK. "Any software house in the country is open to things like this," says Sinclair. "I just worry about how much of it can go on."

Mastertronic itself is now pursuing the matter with the programmer, who has been given the option of admitting guilt or being sued. "I'd like it to be known to any software house not to go near the guy," says Alison Barclay of Mastertronic.

The second clash, between UK and Audiogenic, seems to be more complex. Audiogenic's *The Cost of the Price* and UK's *Quest for Freedom* are

very similar, and were written by the same author, but Sinclair claims UK had the program first. "We paid him £500 for exclusive rights early in 1988, and we made it clear that we would not release it until Christmas."

The programmer seems to have agreed with both UK and Audiogenic, but Sinclair insists that he signed with UK first. Neither software house has as yet seen the other's product, but it seems unlikely that the matter will go any further. "We prepared at this stage to accept that Audiogenic published it in good faith," says Sinclair.

## Commodore predicts profit

COMMODORE released a little further back from the previous last week, agreeing new credit terms and predicting that it would show a profit for the second consecutive quarter.

The new agreement gives Commodore a worldwide sales limit of £140 million, slightly up from the previous figure of £126 million, and is due to be signed late this month. The results for the quarter ended September 30 are due for announcement later this year.

## Budget PC software producer aims for the big time

UK sub-price software producer *Migant Innovations* is set to move into the European market with one of the best bargains ever to be offered in the PC sector. The company is selling *Adatto*, one of the most highly regarded integrated packages in the US, at an introductory price of £69.95 (or a normally £99.95) and is offering free training for dealers in the use of the package.

According to Migant managing director Chuck Hamilton the aim of this is to ensure that practically every dealer in the country knows how to use the package, and to take Migant up into the big league alongside Ashton-Tate and Lotus.

Migant, certainly has a lot more experience on board than the average newcomer. Company chairman is ex-Lotus and Ashton-Tate, while president David Perlich is ex-Ashton-Tate and development head C. Wayne Ruffin wrote *Adatto* and *Adatto II*.

In addition to *Adatto*, Migant will shortly be launching *Simach*, a database management system, for £139.95, and will be bringing other items from its US range into the UK next

year. The most interesting of these isn't software at all -

Hamilton, free training

the company produces a pocket reader that is five inches long and supports hard discs from 300 up to 1350.

The device costs \$160 in the US, and is likely to be around the £100 mark here. For this you get a Hayes compatible box that is completely software controlled - it simply has an RS232 port at one end and two 817 sockets at the other, and is powered by a single nine volt battery. The device has yet to receive BART approval, but is expected to go on the market this summer's next year.

# The answer to the Spectrum-users prayer the **discIPLE**

## AVAILABLE NOW!

the all purpose interface to take  
your Spectrum to the limit.

### DISK INTERFACE

- Allows up to 1.5 Mib of storage on 2 drives
- Loads a full disk program in 1.5 seconds
- Simple linear寻址
- Compatible with any standard drive - single or double density, single/double sided, 4000 tracks, 5, 2 1/4", 5 1/4"

### SNAPSHOT BUTTON

- Saves any program instantly - at any point you wish and as often as you like.

### PRINTER INTERFACE

- Compatible with the whole range of Centronics Parallel printers.
- Uses normal Sinclair commands - LIST, LPRINT, COPY
- Permits user defined and screen graphics.

### DUAL JOYSTICK PORTS

- Sinclair and Kempston compatible.

### NETWORKING

- Operating system allows Ghostly to act as file server, shared access to printer, and disc drive for up to 16 Spectrums
- Interface 1 Computer

Use the disciple with any Spectrum - even the new Plus Two model.

# Umbrella body formed

A NEW microcomputer industry trade association, the British Micro Federation, was set up last week.

The BMF aims to fill and expand the roles played by the now-defunct Guild of Software House, and will include hardware manufacturers, software companies, wholesalers, distributors and the computer press in its membership.

Around 75 companies were represented in the inaugural meeting held in North London, and five areas headed initially for the federation's attention.

It was generally agreed that relations with national newspapers, television and other media were poor, and that a

less gloomy picture of the microcomputer industry could be presented. Most speakers concluded that thorough and accurate market research on the size of the industry and statistics on hardware and software usage was needed. Finally, a suggestion for the BMF to draw up a code of practice for members — pre-announcement of software releases was included here.

The need to act strongly against software piracy, in conjunction with the Federation Against Software Theft was also noted. Finally, the use of the federation as a forum for discussion and co-operation between companies went on the list.

## Three from First

FIRST Software is to launch three new PC packages this month — *Decision Director*, *Ability* and *Priority Ability* is an integrated package from Nigel (see page 8) relating around the CDS, mark, while *Decision Director* is a lower cost alternative (£29.99) consisting of word processor, spreadsheet and window manager.

*Priority* is a £49.95 print utility designed to work with any word processor and to make it easier to control the printer's functions. First suggests it could be particularly useful with laser printers.

Details from First Software, Unit 20B, Horseshoe Road, Horseshoe Park, Pangloss Way, Barks RD8 7BW. Tel 07857 8244.

## Footnotes

LEVEL 8 has signed a contract with Delta 4 to produce a joint project special adventure for publication next Easter. Both parties are keeping quiet about the subject matter, but here we see Mike Austin (8) showing Fergus McNeill (8) a bug he's found in the program...

Commodore is meanwhile keen on convincing us that it knows just what we'd all like in our stockings this Christmas. The company's stand at next month's Commodore show will be "frenzied with innovative gift ideas" including, apparently, "some of the results currently being derived from the Amiga in use at the Heslerton, Yorkshire Archaeological Project, the largest tunnel excavation in the country." Just what we'd always wanted...

CSD on the other hand is

studying the virtues of its Sparklers range of budget games. "Sparklers are too good to be budget," comments the release. As we recall that's what CSD thought when it released them at full price some considerable time ago.

Still, if you can change your mind once...

Austin and McNeill

## New printer from Brother

BROTHER is to launch a scaled-up addition to its range of printers as the *Whisk Computer Show* in January. The Brother 1702B will sell for around £395, has 128 columns and prints at 240 ips draft and 60 ips 60.0 line (letter quality).

The 1702B has a 24K buffer

and as features, including the interface selector, line spacing and baud rates are all selected from the front panel rather than by dip switches.

Details from Brother peripherals, Shepley Street, Guide Bridge, Audenshaw, Manchester M34 5JG. Tel 061-330-8531.

## Diary Dates

### NOVEMBER

1-8 November  
**Electron and BBC Micro User Show**

New Horticultural Hall, Graycoat Street, London SW1  
Details: Hardware, software and peripherals for the Electron, BBC micro and Master series  
Prices: £3 adults, £2 children, £1 discount for advance booking  
Organiser: Cambridge Exhibitions, 061-495 8820

8 November  
**BRICS National Circuit Show**  
National Motor Cycle Museum, Birmingham

Details: Britain software and hardware.  
Price: Free  
Organiser: MCB, 07182 2198

15 November  
**Wales and West Computer Show**  
Central Hall, Cardiff  
Details: 80 types of home computer and support  
Price: £1 adult, 50p children  
Organiser: Pirella Exhibitions, 0603 550991

31-22 November  
**The Commodore Computer Show**

Novotel, Manchester, London W6  
Details: Hardware, software and peripherals for the Commodore range of computers  
Price: £7 adults, £2 children, £1 discount for advance booking  
Organiser: Cambridge Exhibitions, 061-495 8820

22 November  
**8800 Show**  
Big Hall of the Royal Horticultural Society  
Details: Show for the 8800 and Turbo Colour Computers  
Price: £2.50 adult, £1.50 children, discount for advance booking  
Organiser: Jones Pops, Middlesbrough, 0738-66529

26-28 November  
**The Atari Christmas Show**  
New Horticultural Hall, Graycoat Street, Westminster, London SW1  
Details: Hardware, software and peripherals for the Atari range of computers  
Price: £3 adult, £2 children, £1 discount for advance booking  
Organiser: Cambridge Exhibitions, 061-495 8820

Prices, dates and venues of shows can vary, and new ones are therefore strongly advised to check with the show organisers before attending. *Popular Computing Weekly* cannot accept responsibility for any alterations to show arrangements made by the organisers.

## CSD joins the PC bandwagon

ESD's new Superio Distribution is joining in the PC budget software battle with a new label—Fast Software. The first three products to be launched are *Fast Writer*, a WordStar-like word processor for 128 KB; *Fast Reader*, the companion 128 KB; and *Fast Database*, a Palm reader/calculator/memo pad. A full table/calendar combination for \$29.95.

There will be followed by Fast Day and Fast Day throughout and during the afternoon.

Details from CSD, Unit 011:  
Armstrong Hall, Southwest  
Sumner Campus, Southwest  
Farmborough, Hampshire  
GU14 0NP. Tel: 0252  
522000.

## Front end system for Dos

INTELLIGENCE is designed to provide an edge to your marketing efforts and help you

**MSDOS.** It allows up to 32 options per screen and up to ten nested menus, and also features passworded screens. As in Dos 4.02 and it includes a search file generator and editor, a look-out finding for unwanted Dos commands, a Dos tutor and online help. It will also automatically search through a hard disc organising all files under its main system. The program costs £25.

Details from Excel Computer Systems, Cobble House, Hall Street, Chislehurst, Essex. Tel: 0246 75 1076.

### Writes issue from HiSoft

HEWLETT has launched an enhanced version of ModelMaker, a productivity tool similar in concept to Borland's DBase, to run on America's CPC6128. It already runs on all the America CP/M machines, but the new version has been enhanced to take advantage of the 6300's graphics and keyboard layout. The designers are expecting

## Tatung offers Einstein bundle

Ti-PUMP is now offering the carbon version of its UltraSeal™ installed with a 14 inch carbon motor for £1349. This machine has 800 ft/lb, 3 inch disc drive, Centronics, RS232C and joystick ports built in. Unlike the new 2580 it isn't directly an CP/M program, but expansion facilities are available, along with various accessories.

Outside from Tokyo, Stanford Park 12, Parkway, Springfield, TX 75203-1005  
877-555-5555

It has alongside standard spreadsheet software and includes a calculator, note book, phone book, appointments diary, calendar, address editor and key macro facility.

The screen editor allows you to cut text from a file and paste it into your current document, while the key macro facility lets you reproduce sequences of keystrokes at any point in a given program. **Write-Mac-II** costs \$29.95.

Details from: Hobbie, The Old School, Greenburg, Bedford MA 01835. Tel: 0938 214141.

1. **Copyright Clearance Center**  
 2. **1221 Avenue of the Americas**  
 3. **New York, NY 10020-1398**

New Northcultural Hall  
Westminster, London SW1

***Don't miss the great Christmas bonanza of all that's new for the BBC Micro and Electron***

Here's your big chance to catch up on all that's been happening recently in the rapidly changing world of the Electron and RNC Micro.

And there's so much new to excite and intrigue you... **NEW** programs from the fertile minds of Britain's leading software writers - games galore, plus a growing number of new packages for teachers and for industrial and business users.

NEW hardware add-ons that expand even more the power and versatility of your vision.

Electronics wizards regard both the Electron and the HBC Micro as a challenge to their ingenuity. Their latest creations on display at the Electron and HBC Micro User Show will astound and delight you!

## More to being a woman than cooking

Your *Zigzag* in *Popular*, October 23 has prompted me to write as it dealt out for further discussion (aside from a male).

Granted that the computer industry seems geared to male users, but surely there is room for female participation (perhaps the ladies of St. Ordis). Market research doesn't seem to be the industry's strong point, especially when yet another JIFF article game or Teknomania adventure will bring the money rolling in.

Your article goes on to make various totally valid points but doesn't offer a possible solution to the problem.

I don't have a cut and dried answer, but I have another question: what kind of software would most women like to use? On the face of it, there doesn't seem to be very much in women's magazines that would be better served by a computer's interpretation.

Cooking or knitting programs (though knitting possibilities are as tedious as they are effective. There must be more to being female I hope) than that I have a few suggestions:

- a) Tips on the use of cosmetics using graphics and a database.
- b) Goss and advice calculating tailored to the individual.
- c) Romantic adventures involving real people for a change.

If Educational software took a shift towards the reader rather than the teacher.

To men this may sound like a recipe for disaster - do women feel the same way? I think it's time women made their feelings known.

Neil Chapman  
Rushmore  
Surrey

The Editor replies:

While we take your point about no solution being offered in the *Zigzag*, it has to be said that neither of *Popular*'s two women staff were wildly enthusiastic about your suggestions.

I dread to think what a bunch of boring pixels could do in an cosmetics program; diet programs have been around for some time now, and are obviously to be quite useful (if you feel like loading up the computer every time you eat a Mars Bar), but I'm not clear as why you assume only women need to diet. All systems involving 'people' rather than 'stuffs' is a plus we've covered in the *Zigzag* column only recently. The idea about making them 'feminine' incidentally, went down like a lead balloon.

The point in the October 23 *Zigzag* was about mainstream games catering for male tastes, portraying male heroes, and male as hero/only person who can defeat the Mighty Dragon, etc. Somehow I don't think we'll ever see Judy Dreyer's Heroine.

Also, Patricia Whitbread Thoresen the Javelin, or Marnie's Wreckless in the shops, although these three are just as 'marketable' as their male counterparts.

Plus, look at all the games which involve the player as a Heroic Fantasy type off to rescue the latest 'helpless princess'. Let's face it, if you're an unarmed male stuck in a Karateka type scenario, with dungeons, wicked doos and henchmen guarding over you, you're going to need some outside help.

## Fun and education

Although delighted to read your article on the Commodore 64C Commodore's Collection *Popular*, October

18, I fear that Andrew Mayfair may not have seen the hardware from our view but satiated with the machine for years.

He would thus have realised that this collection represents a deliberate departure from the Commodore games' approach comparable in that it appeals to us (providing whole lot of entertainment) over the Christmas period and the basis for continued fun and educational value afterwards.

I appreciate that time may have dissuaded him a long time. The Leisure Genius games, too, *Managely* and *Scrabble* in particular are not only faithfully computerised transfers of the original board games but, I believe, are better in every respect than the original. Computerised bank balances and property auctions score heavily in favour of the version of *Managely* and the educational value of *Scrabble* is legion.

On the subject of value for money, the well 80 the mouse and mouse graphics package plus a 64C or a total recommended retail price of around £350 equates with the complete Collection's price so the *Dartboard*, five board games and *Phoenix* typing tutor are effectively two of charge. So, taking Andrew's recommendation - buy a Commodore's Collection and you have the basis of a sound investment.

Lastly, his suggestion that "a return to the drawing 64" will be Commodore's selection. After four years and world-

continued page 12

## Puzzle

### Puzzle No 232

I am thinking of a four-digit number with all digits different, and 4,000. And I want you to guess what it is.

8010: I replied, guessing a guess. "Sorry, neither more nor less," he said. "Your number only contains one of the digits in the number - but it is in the correct position. How pretty good?"

10 01 01, and I replied, "Very good! The two you have got all the digits present, though not in the right order. In fact you are just 10000 too high."

Of course, I never knew what number he was thinking of - but can you work it out?

### Solution to Puzzle No 227

Answered: Apart from 4034 (given in the question) there are two other four-digit

numbers with the property:

$$4230 = 3^2 + 2^2 + 0^2 + 3^2 \text{ and } 9474 = 9^2 + 4^2 + 7^2 + 4^2$$

**Solution:** In the program on four-digit numbers are taken in turn and placed in the array variable A2. From the array, each digit is taken in turn, and the fourth power of the number is calculated. This is done by using multiplication rather than by using the power command to ensure absolute accuracy. All numbers in which the total of the powers of the digits equals the generating number are printed out.

### Winner of Puzzle No 222

The names this week of 8 Hampshire of 1000, West Parkland who will be following 270

whole sales of ten million units, the 64 is still capturing 32% of the total annual UK computer marketshare. Certainly it represents a substantial revenue earner for Commodore alongside the Amiga. First year Amiga sales will reach in at between 120,000 to 150,000 units worldwide. Pretty good compared to the Apple Mac's 140,000 first year figure for a machine that he claims is "obviously not going to become the same groundbreaker".

## Leeny meeney miney mo . . .

I was interested to read the new letters published in your October 16 issue, making comparisons between the Atari ST and two other models.

The 1040 ST is on my short list for purchase, together with the expected new

QL improvement, the OLT by Samco, and perhaps also the two new versions of the Commodore Amiga, expected soon.

My needs are rather niche like those of Howard Gidley (Letters, October 16). Plus in the games player from Belgium.

However, the letter's desire for good sound and excellent colour graphics could, I suspect, be satisfactorily met by the new Taming Dragons, if only it had \$12K rather than \$50K!

And the new Apple IIGX, plus the rather superior Amiga, could excite him, too. But I am really after a cheap alternative to the Apple Macintosh Plus for desktop publishing and other business applications. As the mini-emergency 1040 ST plus Microsoft's anticipated Fleet Street Editor could be the answer.

One final point - can anyone advise me about Rem disc?

Would the use of Rem disc software such as that marketed by Robtek for the ST enable one to change without a second hard or soft disc

drive? What is the normal advantage of having double rather than single disc drives?

*PJM Kingston  
Bristol*

## Fantastick?

I read with interest the article on the Fantastick 2, posted in Popular Computing Weekly (October 2). I say article, although it reads like an advertisement for an extremely undervalued overpriced product.

All right, so it has four sockets on the base, an automatic file switch and an MSX socket. The Spectravideo Spectack 2 offers the same at half the price.

I know it doesn't have an MSX socket, but that's because it doesn't need one. It just works anyway.

I just try Quarcaster on my Commodore 64, Yamaha CX4M and Toshiba HD-10, without any problem.

I also use two Colson products and games computers on all the above computers, again with no problem.

They don't have automatic file, but they cost £3 each in a secondhand shop.

*Neil Jenkins  
Cardiff*

## QL and ZX magazine

I would like to announce a magazine for Sinclair QL and ZX Spectrum owners. It is called QZMag, and is produced on Microsoft ProDOS for both computers.

It has a strong bias towards programming (especially spreadsheet, but most of the computer), but also includes reviews and other articles. QZMag is available from the address below. Send a cheque payable to P Leverett or PC for a free 50-page issue - Microsoft cartridge, showing which cartridge you would like the cartridge formatted on.

# Get writing - get Popular

**P**opular Computing Weekly always welcomes contributions from its readers for articles, features, and program listings.

Whether you want to write articles, see your programming masterpieces in print, pass on some words of wisdom, or simply let off steam, there's space in the magazine for you.

Ideas for feature articles, or completed articles, should be sent to Christine Blake. All aspects of home computing are considered, but we cannot handle topics anything longer than 2,000 words, so best is best. It's worth checking by phone or letter first that your article will be suitable. Payment is normally £75 per published page.

Technical advice Duncan Evans looks after the **program listings**, and articles on programming. We rely on you for our Programming section, so send yourself a place in the Popular list of items first. £75 for each page we print by having your program submitted. Even if it's not 100% all of pure machine code, but a short program routine, there's only need a place for it - **Bytes and Pieces** (110 a word).

Articles on any aspect of programming are also welcome - with short listings included if relevant.

Got something you feel needs saying 'loud and clear'? Your opinions on any aspect of the computer industry are welcomed, so why not send us to the **Zigzag** section? No more than 600 words, please. If published, we'll pay you £10.

So maybe it's not the money you're after, but you'd just like to have some say in the magazine.

For shorter comments, general observations or queries, there is of course the **Letters** page, with the company offer of a year's supply of Popular bundles for the Day Letter each week.

For more specific points, our team of columnists are always willing to answer questions, and keen to hear the latest information. Drop your lines to **Poppy Bridge** (advertisements always gratefully received), **Tony Keeble** (helps users in many trouble spots, bugs, and other), or, possibly, **David Wallis** (communications), **Kevin Sturges** (programming problems), **Mark Jenkins** (mouse queries) and **Simon Lloyd** and **Mark Bryant** (computer show comments).

All letters should be addressed to Popular Computing Weekly, 12-13 Little Newport Street, London WC2N 6PP. If you mail your letters with the department you want, things get processed much more quickly.

Left: the advertisement Poppy Bridge. Right: the author Tony Keeble.

## The return of the prodigal Adventurer's Club

*Tony Bridge uncovers the mysteries of adventurers' support groups*

One of the most successful adventures clubs in recent decades has to be The Adventurer's Club, run by Henry Maslin. The combination of a full-time club offering help, well-founded advice and discussion in adventures proved irresistible in reply of the hobby's adherents.

During the early part of this summer, however, I started to receive letters from members worried about the lack of response from the club — a distinctly negative state of affairs. I'm afraid in the atmosphere of today's home computing business, I was surprised to hear that this particular operation seemed to have gone the way of other less thoughtfully run clubs.

Throughout the summer, all fans have why come from AOL while I have opened more and more letters from disappointed members. By now you will probably have read that the club is back in business, with Harry back more in the fold. He is now in full control of the club, rather than the managing position he held before and has obtained the services of Hugh Wilson, *Sevenside* Supreme and

Richard Bartles, the originator of MUD1 (Pete Austin of Level 3 and I believe, contributed to MUSHen's development.

If you are nervous about your interview, then it's well worth joining A&A, as it is one of the best. However, the whole episode must serve as a warning to employers that things can go wrong - their involvement is not absolute.

In the meantime, other clubs and magazines were on Nick Watterston's conscience. *Centaur* is the favorite. Many players of adventure magazines, comic strips, ball, unfortunately, unconditionally, the worst verbalists I ever heard and all wrote the magazine and help him out 700 is a good deal - and this is one of the few magazines that received contributions from established writers in the field such as Bob Chappell and Mike Gunder.

What is evident from reading *Diaphane* is that advertising is obviously not in the pockets of the neo-people wishing magazine. Write to Nick at Ed Rendell Road, Sheffield S8 4QJ, or ring 0742 340400.

For: Willingham and Sandra Mason

me and bonding away with *Adventure Prude* and *Adventure-Concave Prude* is the usual trail of help, advice, letters and reviews - although the response is overwhelming it's not poetry as I'd thought that to be a very very paraphrase about the whole thing, and Phil and Sarina seem to acknowledge a lot of support from several different sources and to give

Concise, on the other hand is unique and a much better deal for just \$100, as the magazine, you'll find all sorts of advice on writing and marketing technical programs, drawing on the personal experience of authors who have already taken the plunge. The problem is that it's a direct breakdown of the differences between the Quill and Ingenium's G&L, as well as articles about packaging, copyright matters, etc. and lots of advertisement to go on. Send the Probel can be found at 70 Marston Road, Wigan W93 8JL, and for the Concise version of the newspaper can be contacted at 12 Hatherley Way, Wigan W93 8JL.

**Abstract** The purpose of this study was to determine the effect of a 12-week, low-intensity, low-impact, and low-volume exercise program on the physical fitness and health-related quality of life of older adults. The study was a randomized controlled trial involving 40 participants aged 65 and older. The intervention group performed a 12-week exercise program consisting of three sessions per week, each lasting 30 minutes. The control group did not participate in any exercise program. The primary outcome was the change in physical fitness, measured by the 6-minute walk test (6MWT) and the 10-meter walk test (10MWT). Secondary outcomes included changes in health-related quality of life, measured by the Short-Form 36 (SF-36) and the EuroQol-5D (EQ-5D). The results showed that the intervention group had significantly greater improvements in 6MWT and 10MWT compared to the control group. There were no significant differences between the groups in terms of SF-36 and EQ-5D scores. The findings suggest that a 12-week, low-intensity, low-impact, and low-volume exercise program can improve physical fitness in older adults, but it may not have a significant effect on health-related quality of life.

# Star Trek!

In the year of the twentieth anniversary of the world's best-loved TV series, it's appropriate that the event be marked by what looks like being a classic computer game, writes *Chris Jenkins*, and that's what *Star Trek* is about.

*Star Trek* is known throughout the world, and because of the 60-year TV episodes are still being shown, together with the same films (and another in production) the *Star Trek* game, from the Beyond label, is near completion and looks like a stunning production effort which will capture the imagination of thousands of Trekkers.

The Atari ST version will be closely followed by C64, 86, Amstrad and Spectrum games. In such the format will be similar but it's the ST version which will probably have the major impact with its incredibly detailed graphics and enormous playing area.

The actual title of the game - *Star Trek: The Rebel Challenge* - reflects the format of the adventure. It takes place in an enclosed space where units of *Star Trek* have been going rogue and throwing in their lot with the despicable Klingons. Your task is to control the game, hunting out the rogues and bringing them back into the fold - or eliminating them. The main display shows all the main members of the cast on the bridge, the TV version additionally, see the movie

version. Using the mouse you move the *Star Trek* images in the character you choose and click on bring up the command screen.

The individual portraits of the main characters - Kirk, Spock, Scott and so

on - are wonderfully shown by artist Steven Davis, and would almost be photographs. As each character's command screen fills the main area, the bridge display is relegated to the sidelines, ready to be called upon when you want to access a new character.

Each character controls a different

aspect of the ship's operation. *Spock* manages, *Chelov* weapons, *McCoy* medical and so on. It's up to you to select players, photon torpedoes, warp drive, and all the *Star Trek* paraphernalia we have never so fully and truly.

Your first task, obviously, is to select a star player and with it a *Play* via *Star* to let your course on an incredible animated 3-D star globe then wrap to the star system and scan for inhabitable planets. Putting together a team supplied with appropriate equipment from the stores is the next task, then select the transport space to beam down to the planet.

Once landed, your team must negotiate ship complexes, solving the puzzles of locked doors and intractable doors among their individual skills and the equipment available. Should any character be injured by dangerous situations or other actions, it's back to the ship and straight to the bay for McCoy to work his magic.

The action is illustrated by extremely detailed graphics of the *Zetansians* in orbit and any other ships you might encounter. Again from the familiar Klingon and Rodian battle cruisers, these will include fast-moving *Battle-Ships*, which grow more robust as the game progresses.

The battle scenes take place on two screens: a medium range screen which revolves to show the injection of incoming hostiles, and a short range display in which you target wireframe graphics and launch your photon torpedoes. With luck and skill you should see the alien powers disintegrate. If so, but you haven't sustained too much battle damage, it's on to the next star system in search of the next artifact or part of the quest to complete your quest.

The finished game will include numerous options: routines for *Ultima* to perform, sampled speech from the TV series, and authentic sound effects. With 256 subplots, so complex, and a number of different win scenarios (plus any number of losing ones) it looks as if *Star Trek: The Rebel Universe* is going to provide a host of entertainment for games players of every type.

If you've tired of *Spintires*, *Flite* and the like, this is the big one. US Gold's *Dark Assault* puts you at the controls of a Lancaster bomber, and lets you against Pak, searchlights and of course the japs. It's an effort to do serious damage to Germany's war effort.

Unusually for a flight simulator you play in three screens: a left - navigator, right - engine, and a front and tail gunners. You switch between these with the aid of the function keys, and the closer you get to your

targets the more frantic the action gets.

The game can be started at one of three points: start approach, or mid-Chanai or at your base airfield, with the difficulty level being varied simply by the distance to the target. Starting from base you switch to the navigator to set the course, then to the engine to fire up the engines, then to the pilot to take off.

Once you're airborne you adjust the balance of the engines and toggle between gunners and japs, with the odd dose of flight engineer to

## More bluster and fluster

adjust speed or put out engine fires.

The gunnery section (which well involves any other you might have had about simulations on the home) has speed the engine mission taking away at Pak, searchlights and enemy fighters, and while it's entertaining from an inside point of view you generally find you're knocked out more than a self-respecting fleet could reasonably sustain. I was also a little perplexed to discover that you can, as much opposition as the *Wings* against the *Flite*.

Once you abandon the *Wings* *Wings* *Wings* and get to the real target you need to see to the controls at the right height and speed that switch to the bomb arm, who fire across the height and

drop the bombs. In my experience you then get a pretty picture of your bomb bearing across the lake - and missing.

As a game it's diverting enough, but I feel it could do with a little extra something to make it great entertainment. And on that subject I notice that the wrapping says Lancaster model after model. I've never had an offer from a Lancaster model, but as it hasn't been included I remain disappointed.

## How to win an Academy Award

**P**ete Cooke's *Sea Car* was awarded as one of last year's best games, with original 'modern-look' style graphics and sophisticated controlling of your craft, through doses of water

each and in quality to move up a level you must score over 90% on your program stage.

Menus are used to take you through the graphical stages of selecting a mission

*"A really nice touch here is the option to design your own skimmer"*

### SPACE

Well, every good game deserves a sequel, and Cooke has now come up with *Academy - Sea Car II*.

*Academy* has you as a student pilot at the Goldcorp Academy for Advanced Skimmer Pilots, taking on 20 missions in order to graduate from the college. The missions are divided into five levels of task

to be out and a skimmer to go with it.

A really nice touch here is the option to design your own skimmer, rather than settling for GCS Laser, Lincoln and Mission. Skimmers provided. You can put all the instruments and controls exactly where you find them most handy, and choose your own equipment - within a budget.

Having done that, you can set off on the Level 1 mission, impossibly called H is Moves, Red Doves, Mad Down and Softly Softly. A separate screen gives some further equipment details about what these entail.

Having chosen your mission, equipped your skimmer, and launched yourself on to an unresponsive solar system, you find yourself in a very Sea Car-esque scenario of strange shaped objects turning up from the distance, smooth, sweeping movement from left to right, and plenty

to shoot at.

The mechanics with the game are long and fully diverting - you assured that the game is rather slow straightforward to play.

If you liked the graphics style and gameplay of *Sea Car*, then *Academy* isn't going to hold any disappointments.

**Popular Appeal** ★★★★★

# The tassiest game in the world

**F**orget about street credibility. *Tomstown '88* and *Tom!* from your vocabulary. There's a new quality to be felt.

*Tom!* is what it is, and *Tomstown* is where it's at. And you can get to the latter adventure from *Apprentice*. See *Tom!* in *Tomstown*.

In *Tomstown*, however, being rich is not nearly desirable. It's essential for your survival. Because if you're not rich, you're a tourist and local mean machines. Franklin Stein is a help with tourists.

He leads them to his Crocagators.

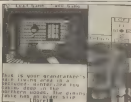

If this is beginning to confuse you, let's backtrack a little. You start at the department store at your friend *Quincy* - described, that is, except for his helpful dog, *Spot*.

Your first task is to find the three-dimensional doorway to *Tomstown* where *Quincy* has disappeared.

In *Tomstown* you can't do a thing until you get some. That means buying new clothes, a new hairstyle, and getting a job. Check out the cops of the *Tomstown Times* that come by with the game for some ideas.

Once you stop looking like a tourist, you'll find the locals helpful - hang out at *Fast Freddie's*, check out the *Day-Less* concert in the park. But watch your back.

Your textbook for the duration is *Good 'ol Spot*. But in *Tomstown Spot* is better known as *Spino*, and registers for the *Times*, so *Spino* wins all the *Tomstown* (Ugly Journalism) awards, and knows locally as *The Legend*.

As you're probably getting *Tom!* first is an adventure like no other. It's funny, ed, and amusing, with an excellent musical soundtrack too. Transfer into the *Wasteland* and you'll get a close encounter with a *Crocagator* to the accompaniment of mean and moody *David* like music.

There are traditional adventure puzzles to be solved - a deep, dark well where you'll need a light, for example. But *Tom!* is original in the nth degree.

The game is not up to the forefront standards, the graphics are no match for the *Apocalypse*. But *Tom!* can hold its head up in any company. Don't be a tourist - get with what's hot.

## A different game

**W**hy is it that new shooter or pool games always have the *Entrepreneur* as their main user? After loading up *Electronic Pool* from musical games what was the first thing to occur to me: this the monitor's spectator?

If you were expecting a game of eight ball *Pool* then you would be in for a disappointment because *EP* only has seven including the white. Initially I groaned at

this, but then I realised just how boring that would be as a game and how much better *Electronic Pool* is because it's different.

What you have here are the six balls and the six pockets numbered from one to six. The game is all about points. So, if you sink the six ball in the pocket labelled four then you score 6 x 4 = 24 points. Just to keep things interesting once a ball is potted the number on the ball moves

round and if you're playing against someone over a set number of frames (one to eight) then all the points scored are multiplied by the frame number, including those few lost.

If the one player game you are given three 'lives' (as it is called) to score as many points as possible, thus representing in the end of frame *Pool* permanency. However - *Pool*, *Pool*. Commencing a foul or failing to pot a ball on three consecutive shots ends you a life.

The algorithms concerning

ball movement and rotation are generally very good with most shots going where you aimed.

Disappointingly, *Electronic Pool* utilizes none of the ST's advanced abilities, but is still a fairly interesting game.

**Program:** *Electronic Pool* *Micro Amiga ST Price:* £19.95. **Supplier:** *Microdeal*, PO Box 55, St Austell, Cornwall PL25 4YB.

## A weak and pathetic effort

**E**very obviously has a thing about flogging a dead horse. Witness *World Games* - the follow up to *Summer Games*, *Winter Games* and *Summer Games 2*. This time you travel in jets to around the world to various locations which bear little resemblance to reality in comparison to weightlifting, barrel pumping, cliff diving, slalom skiing, log rolling, ball

rolling, cable cars and water wrestling (if at all).

*Weightlifting* in *Disrupt* *Russia* is a fairly bland affair, no events outside the total at midnight keeping you awake and no 1000 grams giving you strange periods at the airport.

Ball rolling, cable towing and log rolling are basically garbage, the graphics being amazingly unimpressive.

Cliff diving in *Apprentice* is good fun, the impact of the dive against the rocks when he becomes fat dead and the accompanying *Frank* is almost painful to watch.

Slalom skiing, barrel pumping and barrel are all done so competently that this is hardly good enough. Indeed, the entire package has the feel of something knocked out in a hurry before people get com-

pletely put off with sports simulation.

# Cashing in on the public domain

If you own an IBM-PC compatible, Marcus Rowland can tell you where to get some reasonably good software for cheap

It's now possible to buy a complete IBM-PC compatible computer at less than last year's price for an eight-bit home system with monitor and drives. With the arrival of Amstrad on this particular scene, interest among individual users, as well as small business users, is soaring.

A problem which will probably continue for some time is the fact that PC software prices range from expensive to exorbitant. While manufacturers have begun to produce more reasonably priced packages, under pressure from Alan Sugar and Amstrad's own pricing policy, they are still far more expensive than their eight-bit home equivalents.

One alternative is the cheap and free software distributed by special interest groups (Sigs) known as All of the software in these libraries is either public domain or freeware. Public domain software is available without any obligation; the user is free to copy it, modify it, and pass on copies at will. Freeware is also readily available, but there are usually a few conditions to its use.

In general, the author hopes to be paid for programs if they are useful, and asks users to pass on all of the original unmodified programs (including subsidiary files and documentation, if it is in the disk). If copies are given away.

In return, registration of a program is usually rewarded with the latest update of the program, often including source code or enhanced features.

Some of these programs are too good for commercial distribution, where appeal to special interests. A few are original or provide cheap alternatives to commercial products. Nearly all are Amstrads. Usually there are no guarantees of reliability or compatibility with any given hardware or operating system configuration.

The most important open-access PC libraries are probably the American PC-Sig and PC-Biz collections, and Britain's

*"Some of these programs appeal to special interests - a few are original or provide cheap alternatives to commercial products"*

The IBM-PC compatible

PCBSIG (PC Britain Based UK) Sigs. Several British suppliers have access to these collections. Usually it costs £1.90 or £2.00 to have the contents of one library volume (300K) copied on a formatted disk, plus postage, though this can vary between different suppliers. All now charge a membership fee.

Many of the programs in these libraries are bug-ridden or otherwise useless; the selection below covers software I've tried enough to keep. It also reflects my own interests, since I don't use financial programs or spreadsheets they aren't covered, but I've probably given word processors and utility programs a little more attention than they deserve.

Most of the volumes contained at least additional programs, of varying quality. All of these programs evaluate some documentation, though the quality is very variable.

Programs were tested on a 540K IBM PC with a colour card and RGB monitor, using PC-DOS 2.0, and were also tested

for compatibility with Salsbit, a popular monochrome-headed program that is a good test of software bugs. The first two have also been tested. They installed on the new Amstrad PC, however, in the crash of the PC-DOS drive, it wasn't possible to test all programs comprehensively. They were not, for instance, tested with Gem loaded. All are claimed to run in 256K or less.

Probably the most famous Freeware program is PC-Write, a word processor by Bob Wallace (Ducksoft). The current version (2.0) has a maximum file size of 62K, approximately 45 double-spaced pages, and is fast and moderately user-friendly.

Unfortunately this program tends to suffer compatibility problems with each new release; these always seem to be differences between control keys, embedded control codes, and the like.

Features of the release include eight screens and multiple document editing, DOS commands from the program, real-time document merge (to allow final documents much larger than 62K), printer control codes, and an extremely wide range of configuration options, including every aspect of program operation, display, and screen control.

The main attraction is that they don't ask what you see is what you get: programs here is only formatted when it's printed, and page breaks aren't shown on-screen. There is a 41-page manual supplied as a text file on the disk; this isn't the complete manual, which is supplied on payment of a \$75 (around £30) registration fee, along with the latest version of the program and its source code.

If someone registers a copy of your registered disk you'll be sent \$25 (about £10); you may attach copies and you make a profit. Versions up to 2.0b were supplied with full 550-page documentation, as a compressed text file, and are still available. PC-Write Version 2.05 is on PCBSIG volume 03, version 2.0 on PCBSIG volume 001. Earlier versions can be found on other disks. All versions support a wide range of monitors and printers.

While PC-Write covers most aspects of word processing, neither gives an on-screen display of form, except by showing a marker for each control code. Deftwrite, by Horstmann Software Design, remedies this omission, but is less than ideal in other respects.

It shows 10 lines on-screen (on the

continued on page 254

► continued from page 18

PC, in memo graphics mode). These three include normal text, bold, italic, and English, Greek, and a range of other scientific and mathematical symbols.

It's advertised as a scientific word processor, and can assemble complete multi-level equations. The procedure isn't particularly simple, but the results are extremely good, ranging from draft quality to a high-resolution print mode that links several characters per page but produces extremely legible text.

The main snag of the program is the author's method of persuading users to buy the program, a desktop 30-second advertisement in a book, and on every five thousandth key press. Users who register the program get a version without the advertisement.

There also seems to be a bug in the printer configuration program supplied; when run it assembles the configuration data on the disk, making the program abort as it loads. Luckily the default setting is for most popular dot matrix printers, so should be suitable for a wide range of machines.

Finally, the text display isn't particularly clear on a standard IBM graphics monitor and other screens with the same resolution (probably including Amstrad).

Full registration of Chemview costs \$669.95 (about £50), with further payments needed for Hercules and VGA graphics cards, popular alternatives to the standard IBM colour graphics display. Registered users get additional printer support, the latest version of the program, an editor for additional fonts, and a full manual. As it stands this program may not be a good alternative to Microsoft Word Junior unless you particularly need the more sophisticated graphics it provides. Chemview is on PC-Sig volume 173.

PC-Desknote is a memory-resident program designed as a replacement for Siskind, offering Siskind's features of raised text editor, modern buffer, window, and diary, plus additional features such as an alarm clock, day calendar, and journal control. Not surprisingly, it isn't compatible with Siskind.

Another problem is that it doesn't save that fast in Ascii format, which makes it difficult to use the program to export text from one file and paste it to another to perform cut or Siskind4. I wasn't able to test this program on an Amstrad, and would advise users to be fairly cautious. Registration is \$25 (\$18). PC-Desknote is on PC-Sig volume 133.

Three By Five (Softshell Corporation) is an unusual database package, designed to search through documents for references and create a report or separate files based on the documents it checks. It can cope with a wide range of files, including Ascii, Wordstar, and the like. It also has word processor features and can be used to edit documents as it

searches them.

One unfortunate aspect of this program might rule it out for some users, it reads the pointers as it loads, and anyone who uses a print spooler or buffer may find that they can't use it during a long print run. *Three By Five* is an PC-Sig volume 173, with documentation and sample files. The author asks users to register their copies, but doesn't seem to ask for any fee.

*After Office* by Frowd is a collection of disc tools, including a disc zipper, a file recovery program, a spreadsheet for missing records, and an optimizer. All seem to work well, though they require some knowledge of the operating system and machine code for safe use. Bearing this in mind, it's always advisable to work on backup copies of discs, various utilities allow safe copying of a corrupted disc before salvage is attempted. Registration costs \$40 (\$28), with the benefits of telephone support (not particularly useful in Britain) and \$19 refunds if copies of your disc are registered in turn. This package can be found on PC-Sig volume 245, along with a database by the same authors.

*Codebug* by David H Smith is a limited implementation of Logo incorporating graphics (including some extra commands) and sound, but offering less interpretation, the ability to save screen images in file, and variable numbers of parameters to primitives. The disc holds 54 pages of documentation, and some prepared subroutines. *Codebug*, for example, draws a lovely fractal pattern. My only concern is that it runs fairly slowly, I've seen implementations for other computers that worked as quickly or twice the speed, and the name implies it. *Codebug* is on PC-Sig volume 84.

Other languages available through user supported channels include several machine code assemblers, Log Ollie, on PC-Sig volume 78, Patch (Big Patch, on PC-Sig volume 54-5, Little & Patch on PC-Sig volume 263-4), Prolog (PC-Sig volume 417), Pascal (PC-Sig volume 404, 5-10, and 540), and C (Small C, PC-Sig volume 181).

Many of these implementations deviate from industry standards or are limited in other ways, for example, the two Pascal compilers are mutually incompatible with each other and with the most common compiler, Turbo Pascal, while the third Pascal program mentioned is an interpreter that's incompatible with anything other than a restricted subset of the language, but allows cross-compiler debugging and single-step execution of programs.

There is also a huge range of data concerning useful subroutines for various languages, most are for Turbo Pascal, followed by C and Basic, with other Pascal variants using a fourth place.

This survey has necessarily been extremely brief, for example, I've not mentioned any of the huge range of communications programs available in the public domain from simple modem packages to complete bulletin-board systems.

More information on these and other programs can be obtained from two organizations:

Public Domain Special Interest Group,  
126 Holly Road, East Dingswood, Swales S6619 3EA, Tel 01454 712883 (also File Subnet board);  
Compulink Users Group, PO Box 263,  
Bough Green S.L.I. Tel 04867 6539 (also File Subnet board).

In two weeks time we'll look at public domain games available for PC-compatible.

# This Disciple is no Judas

One of the problems with the Spectrum is that in order to build up a sophisticated system, you must add on many peripheral units, all of which must plug in to the user port. What's obviously needed is an interface which serves many functions, and if possible offers some new facilities. The Disciple seems to qualify on all counts.

This means-adding one offers disc drive interfacing, disc program transfer, catenaria printer interfacing, networking and dual joystick ports, and costs a lot less than buying all these separately (apart from the obvious increase in rate of use).

The Disciple (which just) is similar in appearance to the Zenith Interface 1, and is in fact compatible with it. It fits on to any Spectrum, via its standard user port connector, and is powered and placed, making the Spectrum to a convenient typing angle.

To the right of the unit is the disc drive connector, to the rear are the networking sockets, twin D-type joystick ports, follow-on user port and catenaria printer port. On the left are the two control buttons, the initiator, which disables the interface's operating system in the case of a clash with incompatible peripherals, and the ejection switch, which can be used to produce screen dumps.

The virtue of the Disciple is that it can be used with any standard disc drive, single or double density, single or double sided, 40 or 80 track, 5 inch, 5 1/4 inch, 5 1/8 inch. Likewise, any Catenaria printer will do. This is because the operating system, which is easily loaded from cassette, can be altered to whatever add-on you have.

The pre-production version of the operating system contains models of a series of test screens asking you to enter codes to define the type of drive, type of printer, and various options for file spacing, special printer functions, networking

features, and so on. Once you have defined your system, you can save the file to a formatted disc for future use.

In operation, the system file resides in the Disciple's RAM and so takes up no Spectrum memory space. Unfortunately you must use the init button to disable certain functions if you want to use a harddrive and Interface 1 while the Disciple is attached. The Disciple disc operating system allows up to 8000 to be stored on a double sided, double density disc. You can use

any disc drive with a standard Shugart connector, typically, a BBC compatible unit.

Up to two disc drives can be used connected, using file names of up to ten characters to store several different types of file: basic, data arrays, character arrays, machine code, screens, interactive format or 'unaphans'. The different types of file are identified with a code meter and a display of all the space used, when you list them using the Cat command.

The syntax used for the disc drives can be the same as that for responsiveness, to make life easier; however, there is a simpler syntax available which addresses the drives using the prefix D1 for D21. Files can be renamed, copied, erased, saved, and so on. The computer can be reset without disrupting the DOS, and you can also use the Disciple's 'unaphan' button to dump the drive 48K (max 128K) program to a disc. This is of obvious use in creating a disc software library, and in saving programs at crucial points.

Using a printer is pretty straightforward, having defined your operating system in the questionnaire-driven test screen, you just use L-Print and L-List. Two positioning commands, Plot and Alt, are also provided. It's also possible to produce screen dumps from any program, using the Snapshot button and the case shift key.

Networking allows up to 63 Spectrums to be linked with Disciples, to be linked together in a system sharing master disc drive and printers. The applications, especially for education, are obvious, again, the file saving system is defined in an operating system file and answer screen.

Finally, the Disciple's two joystick ports can be used either as Catenaria standard (single unit) or Zenith (double unit). While claimed data transfer rate of 128K/second using a single density drive, and access time of one second, the Disciple's most obvious virtue is that it gives Spectrum owners easy access to disc storage. The unaphan facility, printer interface, and joystick ports and networking are big bonuses.

My only reservations about what must be seen as a very desirable purchase are that the pre-production manual and operating system software are pretty primitive - a huge amount of polishing would be useful - and that both of the review model's switches disintegrated. A del of tape/gas needed those, Rockstar!

Then again, I can't think of many Spectrum owners who would not leap at the chance to get their hands on the Disciple.

The Elite joystick

## From traditional sticks...

Electronic's latest addition to the joystick series covers the range from traditional to totally space-outed. Both offer something for first-time buyers and experienced gamers players looking for that little bit extra performance, and since the sticks feature the standard D-connector they can be used with Commodore, Atari and Amstrad machines, plus Spectrums with a suitable interface.

The more conventional stick is the Elite, which has an unusual body that shapes best in a fast game (streamlined and easy to use). The Elite is made of high impact ABS plastic with a steel shaft.

The Elite also features micro-switches, making for precise 8-directional control. The unusual bulbous shape is very comfortable for their left or right hands, and the two fire buttons - a large one for single shot and a smaller one for autofire - have a positive action.

Bound to arouse more controversy is the amazing Joybat. Though it looks exactly the same as a joystick, it looks more like the Chernobyl nuclear plant, with a large spherical controller, a flat dog-leg shaped base and five controls. However, at the Japanese electronics capital, this is "New weapon beyond joystick! High technological item based

# The paperless office must wait

**T**here is one single technological leap that must be accomplished if we're to achieve the paperless office, binary shuffle dance. How you may think that dispensing with paper is a matter of getting everybody to communicate with the aid of computers and printers — and that's happened, we can just stamp all the paper, check!

Well, that's not exactly true, firstly because there in the US have already shown that the current generation of keyboards isn't adequate enough for the paperless lavatory to become a reality, and secondly because no matter how many of us have the necessary kit there will always be some need who insist on handling out text with the aid of standard Good and Beautiful printing. Now if you've got everything geared to handling digital information, on disc and in Ram, the arrival of paper-based analogue information is decidedly uncomfortable.

The point is that the paperless office tends to have an interface to paper. It is in fact a bit — basically, computers need to learn to read.

Now they can do that, but it's a complex and expensive process. Page scanners costing several thousand pounds will read in the patterns of letters, compare these to patterns stored in the computer's memory and assign an ASCII value to the letters provided they're recognised. The expense lies in two areas. The method used to read the data on the page has to be highly accurate, and the software has to be flexible enough to recognise a letter in many different locations as being the same letter. You may be able to read it twice, but getting a computer to do so can be tricky.

The Oberon Omniscriber is a valued — then it must be said faded — attempt to break through this optical character recognition barrier. It was first launched around two years ago at £499, which is

*"The basic concept of the Omniscriber... consists of a flat surface with a ruler attached — place the text to be scanned in a window in the ruler, one line at a time and track the scanner along it"*

not staggeringly cheap for the sort of device that unfortunately the computer's obsessed in cutting the price to this level squeezed it from establishing itself. Oberon won't just, but the best is now on the market again, and it £39.99 is going so well that the vendor has just showed me up telling me the price has gone up to £49.99.

The basic concept of the Omniscriber is good. It consists of a flat surface with a ruler attached. Place the text to be scanned in a narrow window in the ruler, one line at a time, and track the scanner along it while reading down the scan button. The Omniscriber acts as a modem, with baud rates from 300 to 1800, so anything it reads should be receivable with the relevant camera software.

Now the problems. You can only scan one line at a time, and read out and spacing is quite critical, so some text just won't scan. If the device were a lot more expensive it would use keypad macros to take the scanner across the paper at a constant speed, but as it doesn't you need to have a steady hand.

The net result is that you'll only get a completely accurate representation of a line under optimum conditions, and quite often you'll find you have to try a line two or three times before you get it right. You can get the text across into digital form,

but you can find that it's taking you as long — or longer — than it would just to type it. And once you have got it in you'll probably have to run it through a spelling checker and debug it.

Now a very good! The obvious answer is "why Oberon go back up?" but at £49 — or £90 — it starts to look like an interesting deal, if not a good one. If you seriously think you can do a useful file transfer job on it go and feel your head in a bucket of ice cold water until you feel better, but if you're interested in the technology and want to experiment it really is decent value.

## to totally spaced out

upon Game Engineering both the design and colour aspect... this forum can respond to your adventurous spirit! Whatever that means, it's right.

The Joyball has four fire buttons, two of which are normal and two of which are auxiliary. The auxiliary ones can be switched from P/S to M state as needed using a slider switch between the top and the fire buttons.

The increased comfort of the large ball, as opposed to a stick handle, comes into its own, because you need only hold the ball loosely, your hand does not become tired so quickly.

Operating the Joyball takes some get-

ting used to, since it involves learning a whole new set of weapons. However, tried out on a whole range of fast moving arcade games, including *Defender* and *Space Invaders*, it proved increasingly effective with practice. Certainly as far as my son if you want to get one up on the neighbours.

Product: Joyball, price: £69.95. Suppliers: Amstrad, Ray, and Spacemart with exclusive franchise. Price: £15.95, £24.95. Suppliers: Games, Pinfold Lane, Wokingham, North Hants. RG10 2AR. Tel: 0262 894005.

The Joyball — no jokes please

## Programming: QL

## All Sorts

Robert L. Edwards

**S**orting machines are an essential feature of many computer programs and a great deal of time and effort is expended developing more efficient sorting algorithms. One of the fastest, the Quicksort, is recursive and therefore cannot properly be implemented on fixed frame computers. Although this is no drawback to the QL it is not particularly popular because the procedure takes a lengthy and recursive is quite slow and uses large amounts of RAM.

To provide an efficient but non-redundant routing scheme for the Gd, I have developed a variation of the ripple carry technique which could easily be converted to support other fixed-point formats.

During sailing, mass may be viewed shifting when the wind out of the array. Hooke starts replace the shifting by keeping a value in a temporary place and the other position in the list is found for it. This means that the routine makes only a single pass through the array. My various books in books the course

[illegible]

The standard way of finding the correct place for a value within a sorted list is to divide the list in half and test to see which half should hold the target value. That portion of the list is then divided into two and the test repeated until the actual position is found. This is known as a binary search.

The `Midpoint` takes the first occurrence of the array as its target value. The array elements before it in the last row (those which have been deleted) are not a target and this area of the array is limited using the binary search method in `GetIndex` within the target value to be placed. The target value is removed to a temporary variable, thus creating a space in the array. The array elements between the target value's old position and its destination are shuffled down one space. The target value is then moved from the temporary variable into its new space.

Microsoft works without consideration of array of any variable type (Integer, String or real variable). This will not be possible on other computers and an appropriate variable type for string will need to be used. Comments should also take into account the Superflow System Data which required the number of elements in an array.

## Pine Tree Generator

D C Newll

This QL procedure prints a pine tree at a given position (x,y) and of a given height *H* on the screen.

The procedure may be used within a loop passing random values into these parameters, to produce landscapes of trees. Screens like this may be useful in games or other programs requiring computer graphics.

```
100 DEFINE PROCEDURE Pine(x,y,H)
110 LOCAL x0,y0,x1,y1
120 LINE x,y TO x,y+H
130 FOR s = 1 TO H
140   y0 = y+H-ATN(s)/2
150   x0 = 1/2*(18-ATN(s)/2)
160   x1 = 45+18-ATN(s)/2
170   x = 50(x0)
180   yf = x*(200-x)/1
190   yf = y0-yf/2-200*ATN(yf/2)/2
200   LINE x,y0 TO x,yf
210   LINE x,y0 TO x+2*ATN(yf)
220 END FOR s
230 END DEFINE Pine
```

## Quick Sort

J E Mucklow

This sorting program was written on an Atari ST but will work on other computers with very little modification. The variables are as follows:

A=Outer loop, B=Inner loop, C=Array containing numbers to be sorted, L=Upper limit of array, T=Temporary variable and M=Position of top value of array in B loop.

```
10 FOR A = 1 TO L
20 H = A
30 FOR B = A TO L
40 IF C(B) > C(H) THEN H = B
50 NEXT B
60 T = C(H) : C(H) = C(A) : C(A) = T
70 NEXT A
```

## Triumph Adler Dump

D O Newll

The procedure for the QL allows screen to be printed on the Triumph-Adler desktop printer operating in graphics mode.

The routine assumes that the printer is connected using a standard serial to parallel. Centronics interface operating at 9600 baud.

The programme takes approximately 10 minutes to run.

**With Kasey Garrock**

### Graphic conclusion

of differences of  $\alpha$ -particle  
decay rates

**Q** I have been programming my C64 for about six months now, and am still a little confused about the high-res graphics modes, particularly, Bit Mapped Multi Colour mode. What I don't understand is where these colours are kept, and how they are represented on the screen. Could you help?

[illegible]

The screen resolution in this mode is 160x200 with two bits defining one of four colours in the following way:

Each of the colour bars contains 1000 bytes each, while setting the colour of a dot (pixel) of graphic in the image, depending on the mix as above. The image is not an an illusion.

Each row contains 4 sets of 2 bits as taking the top-left-most pixel on the screen, the colour is set with 00000000 where XX can be 00, 01, 10, or 11 such pair referring to a specific colour. The next pixel to the right is set with 00000000, the third with 00000000 and the fourth with 00000000. So, to set the second pixel from the left, in the top row, in the colour specified as 0000000000000000 PAGE 24976.  
32x32bits, i.e. both bits are one. The format itself is set out in the following way:

Byte contents	Byte contents
0 00 00 00 00 00	8 00 00 00 00 00
1 00 00 00 00 00	9 00 00 00 00 00
2 00 00 00 00 00	10 00 00 00 00 00
3 00 00 00 00 00	11 00 00 00 00 00
4 00 00 00 00 00	12 00 00 00 00 00
5 00 00 00 00 00	13 00 00 00 00 00
6 00 00 00 00 00	14 00 00 00 00 00
7 00 00 00 00 00	15 00 00 00 00 00

uses an on-the-fly 48-bitmask or 1440 apriori  
uses from the 240 items.

Here, the screen image is made up from  $80 \times 25$  blocks of eight bytes, each defining 32 pixels (hence 32000 pixels or  $160 \times 200$ ). To find the location of a specific byte given its X,Y coordinates use the following formula:

Mammals: 100% (1/100)  
 Birds: 100% (1/100)  
 Reptiles: 100% (1/100)  
 Amphibians: 100% (1/100)  
 Fish: 100% (1/100)

This is the offset from the start of the current set to get the address in memory. Add the jump start address (memory address).

Once the particular logic is found, the list goes round to get the colour and liquid with  $20^\circ\text{N}-25^\circ\text{N}$  [2, 42-43] but remember that there are 18 colours other than 0.

BP-10 (blue) beta case (C) 10.0, 10.0, 10.0  
 gamma case (C) 10.0, 10.0, 10.0  
 BP-11 (blue) beta case (C) 10.0, 10.0, 10.0  
 gamma case (C) 10.0, 10.0, 10.0  
 BP-12 (blue) beta case (C) 10.0, 10.0, 10.0  
 gamma case (C) 10.0, 10.0, 10.0

To actually photograph, you will need to load the memory-address address, AND with 255 (0xFF, 0.13 or 3) and then OR with the appropriate key. The AND is needed to zero any bits that might be set in the key.

1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 26

limited to 4 per 4x6 square with the background colour being the same all over the square. So if you POC: 2469.228 (1) to 0-1 000 and then POC: 33381.0 POC 33883.178+2 POC: 58288.2 you should see from the left, the colours green, red, white and black.

## Coloured Commodities

**Journal of Management and Organization Studies**  
1997, 1(1)

**Q** I have a Commodore 1981 color monitor and I would like to connect it to my video recorder to get a good picture. I have tried connecting the video output to the Lumin input and get a black and white picture. How can I get colour, and is the sound input compatible with the video recorder's output?

**A** The UBCI has separate inputs for colour and brightness, video recorders send out their signal as composite colour and brightness. All you need to do is get colour to connect the video signal to both colour and luma inputs, as above.

The second input for the processor is comparable with the Hells 18D standard so if your video has the same output, and model of them do, then you will be able to convert the second output directly to the other resolution.

**Colours:** White, black, grey

4088 JIA ET AL.

**Q** I own a CPC464 and am trying to connect it to a Ferguson T2 RGB TV/Monitor. Although this is easily done with a ready-made lead, the full range of colours are unavailable - only 8 out of the 25. Is it possible to connect and get the full range of colours with this monitor, and if so, how?

**A** It sounds as though the odds may be stacked against you. The demand

PGH is not the best I know standard. Check that the Lysine has been correctly incorporated, if there is some on the T.E. it may then be only by the cause of the insoluble.

Alternatively, there are two types of PDS signal, loss and non-loss, it may be that the TX is expecting the opposite to that which the Answer puts out if this is the case, there is no way you will get all the colours from the Answer once the TX.

## How to do papers

Centre for the Study of the History of the  
University of London

**Q** Can you explain to me how you write "Notes" for readers?

**A** I presume you mean chest pains, starting different numbers and the code to get more lives, higher scores, immunity from death and so on.

I've only ever done it for a few games and then, as a certain culture, by trial and error. How it is done depends on the machine and how well the game is protected.

For all that, you really need to look at the code, and work out what it does, while you are doing this, you will generally find that messages such as "You lose sucker" can be located. These can be edited and personalised quite easily, by finding their absolute location in memory when the game is loaded, and then overwriting with the new text. Once the new address is set, run the game by calling `callers.pif` and you should have all the rest of the code.

Attacking other segments of the game often results in a loss of knowledge of machine code, which a disassembler might depend on for the machine code. The term address of the game can be found, from the header on the tape, or by looking at the program head address memory location, after the game has been loaded, but not run. Start disassembling from here and you should find that the search requires the defining things like the number of lines can be found. If you look at where the data for lines is loaded from, you can then alter it, so that when the game is run, you have better

# Midi Master for your Atari blaster

Mark Jenkins brings news of a new music package for the Atari and Commodore ranges

It's good to see some of the simpler music being supported by powerful music software. And the 3-bit Systems *Midi Master* fits the bill for the Atari 800/800X/130XE ranges, just to mention. It's a hardware/software package, but the hardware is very simple - a multi-pin plug for the Atari's serial disc drive socket, leading to a pair of Din plugs marked I and II (for Midi I and Out).

And the software comprises two discs for one tape, one for the sporting system and one for examples. Music is played via Midi, so you'll need appropriate synthesizers - the software plays up to eight monophonic tracks, so two Casio CZ-100s is a nice mode (it's the full gamut). You want to keep returning to the CZ-100, but for the past 18 months (or so) it has been by far the most practical way to do Midi synthesis, offering powerful eight-note chords or four different monophonic sounds simultaneously for around £240.

So the software is in effect a self-sufficient real-time eight-track sequencer or composer, but it's also useful for owners of the Atari Music Composer cartridge or the disc version of the *Advanced Music System*, since the demo programs included can play tapes from these packages over Midi, either polyphonically over a single Midi channel or monophonically on four different channels simultaneously (which really covers the two options offered by the CZ-100).

The package also offers two sound editors for the CZ-100 and for the budget Yamaha DX-100, which in some ways sounds more powerful (although it doesn't have the four-voice multivoiced playing option). These allow you to create new sounds and store them to disc or tape, which is a valuable option since both keyboards rely on single data entry sliders for editing and neither has a very informative LCD display.

The main music screen of *Midi Master* is divided into a status line at the top showing memory remaining and metronome list, and the status block which has a section for each of the eight tracks. The Metronome gives audible counts between 0 to 4 and 3 to 4 again (you can double the metronome by adding its speed to zero) and the eight-track section each have their following parameters:

**Rec** - enable recording and set Midi channel from one to 16.  
**Play** - enable play and select Musichannel.  
**Page** - manual a memory number from zero to 127 over Midi before play commences. You have to take into account that some synths number patches from 00, others from 01, and others from 11 to 99 in banks of eight.  
**Pos** - transpose pitch of track in semitones, plus or minus 99.  
**Rep** - number of repetitions of a track.  
**Lead** - delay lead-in time of a track in 100ths of a second to compensate for delays in long chains of midi instruments.  
**Clp** - control time shared between repetitions of a track.

The S, L, W, R, R and F keys control Save, Load, Write (erase a single track), Play, Repeat (play or more tracks simultaneously with an eight-track chorus) if the metronome is enabled) and Done (change the name of any track by tapping out the new rhythm on the key).

As you can imagine, *Midi Master* is very easy to use, but since there are no facilities for advanced composition such as track copying, song editing or step into many of complex phrases, it could become limiting. I don't have much idea of the total capacity - but then, my copy of *Midi Master* suddenly refused to load, so I don't expect any deeply considered opinions on the thing.

2-Midi most describes the playback facilities for *Midi Composer* and *Advanced Music System* lies in having some limitations, mainly due to the fact that a lot of effects on these packages are created by repeating notes and envelopes, which doesn't have the same effect over Midi. Future versions are likely to support velocity recording and to cope with the more tractable Atari Smart Music Writer and Activision Music Studio packages.

As for the patch editing facilities - well obviously these will only be of any interest to you if you already have a CZ-100 or 1000, 2000, 5000 or 2306, which can only be edited via Midi or a 130XE (or 21 or 25). The Casio version consists of a single table of parameters which are altered using the control keys which many (or maybe half) owned the system and the DX version transfers sounds to the metronome and enables you to edit the raw Midi parameter data. A valuable facility though, with CZ storage cartridges being very expensive and the

DX100 saving only one boring old octave.

2-Midi also has a package called *Perseus Music Master* on CZ 35, and this will allow you to load and play up to nine eight-bit samples through a hi-fi or other amplifier and using from 32 patterns of between four and 32 beats. It's a three-channel polyphonic, which means that you can have a hi-fi sounding in a beat which is already occupied by a bass and a piano, for instance.

*Midi Master* is £23.50 by mail from 2-bit Systems, 44 Mowden Road, Donstable UK 460.

Expanding news from Steinberg, which has completely re-visited its range of computer music products and introduced several new names and updates.

The Pro-24 package (£250) for the Atari 2307/1340ST, which allows you to compose 24 channels of polyphonic Midi information, is now capable of reading the SMPTE code used to synchronise music to films and video. Steinberg has clearly introduced a SMPTE code generator which connects to the mixer's RS232 port - it will be added £800.

Also on the Atari front, a music notation/sequencer program, and a visual editing package for the Atari 5900 sound sampler, which is becoming very popular (see November/December), are due to be announced. The latter package will include the ability to convert SMD files to Protools 2000/2002 files, which is good news for owners of earlier samplers (assuming they want to patch each other's standard).

For the Commodore, Steinberg has repackaged the Pro-16 composer on a cartridge so you don't have to load the software from disc at the start of each session. Pro-16 is £239 and has sync-to-tape and graphic editing capabilities, and Pro-16 Plus at £299 also has a scorewriting function.

On disc, the range now includes editors and sound library packages for the budget-based Alpha Juke 162 (£490 - £80), and for the powerful King DW8000 (£999 - £80). The latter Commodore-Midi interface a £60, the 941 edition with sync-to-tape at £120.

## All aboard for Ireland

*A new board for Ireland, an ST special, and answers to readers' queries from David Wallin*

**L**ots more letters to answer this week, to start off with, queries about new boards. The first board is called Dubois, and going by its specifications, it's some sort of super-board. Dubois is the only board I know of that runs in the Republic of Ireland and the sysop (Stephen Kearon) says it is the first.

This, claims Stephen, has achieved a good deal of success in the board, which has resulted in Miraclo Technology donating a V22bis VHS3000 modem (one of the two modems available, and is at the same price as Peter's Series 4).

This sounds like a good deal to get started with, until you hear which computer was donated, a Commodore Amiga, with three 3½ inch drives and hard disk pre-installed. The Amiga was donated by the Tomorrow's World Group in Dublin.

Sounds a good board is waiting again to go, so why not give it a ring on Dublin 684-634 (to ring Dublin from within the UK, dial 0037-044666)? The hours are 8am to 8am, Monday to Friday, and 24 hours at the weekend. Scores of access are just about all the ones I can think of: 300/300, 1200/120, 1200/1200 and 2400/2400 (not to confuse thinking like 75/1200 or 600/600 but hardly anyone uses these speeds), come to think of it, who uses 2400/2400 baud? The modems cost a fortune — in excess of £500. The format of the speed (ie, Bell or CCITT, not data protocol) was not stated so CCITT was used, but I think the VHS3000 is a Bell modem as well, and Bell boards are used. The data protocol doesn't matter, start bits and stop bits as either BNT (standard Bell) or 7E1 (Frametec — French and Communist boards), automatically detected on line as. Some transmits terminal software does not allow any sort of polling, and these won't work — if you're not sure about your software, give Dubois a try and find out.

How for some time on the board called ACS BBS, sponsored by Atlas Computer Supplies. It is aimed particu-

***"ACS BBS has a competition Sig which donates any money it generates to charity. It is the first board I know of to do this, and it is aimed particularly at ST users"***

larly at ST users and this is reflected in particular by free downloads for the ST and an ST programming Sig which contains most of the source codes for the finished programs.

The sysop, Paul Conlan, who runs the board on behalf of Atlas Computer Supplies, says that there are a lot of ST users out there with communications software and hardware who are just waiting for and need a BBS at this sort. It also has a competition Sig which donates any money it generates to charity, and the first board I know of to do this. Personally I think it's a great thing. One thing that may be of interest is the sysop's Telexnet-based multiple number, which is 72-044080000.

The speeds are V21/V22, 300/300 or 1200/120, with an BNT protocol (standard Bell protocol). It's online from 10pm to 8am, seven days a week. Lastly, the phone number: 01-661 6667. Although I said the board seems to be aimed at ST users, you can log on without an ST if you want.

Next on to a problem. Mike Mesdag of Relpis, has E-Mailed me telling of his problem concerning using Joyce to access Viewdata systems. He says that Sage Soft's Chi-Chi Club doesn't handle colour text and backgrounds very well, and when the bug was announced on one (Relpis) its content is hidden. Try phoning Sage Soft, Mike, and ask its technical staff for help, as you can give them a detailed description of what's happening and they may have some ideas.

If not, secondly you could try a different piece of software. I can recommend Comma from Modern House. The big difference you will notice between Comma's viewdata screens and Chi-Chi's is the Comma's are 40 columns and take up just under half of the screen, whereas Chi-Chi uses the full screen.

I cannot guarantee that Comma will not have the same problem, but I have never encountered a problem with Comma or Chi-Chi. Contacting Mergals, which wrote Comma, may give you a guarantee or at least some help as to whether or not it will happen. Mergals' address is 105 Roundway Court, Bournemouth, Dorset, BH1 1RN. I don't have a phone number for them, I'm afraid.

The next problem is from Bob Marshall, simply asking for help or advice with the VTX 7-11 package, especially on 300/300 baud, as he appears to have problems. If anyone out there has any possible answers, then please Promise them the board with my communications section and select number (gets from the main menu and leave the answer): it will be put up on the board where Bob can see it. Promise that is a Viewdata based and the number is 01-200 71170. If you don't have a Viewdata emulator on your software then either E-Mail to send mail me and I'll make sure Bob sees it, I'll also print any advice on the VTX 7-11 in the magazine as well. One quick question, from Dave — left on Promise that with no guarantee, is 300/300 available on a VTX 5000? Well, I'm not sure, but I've heard people talk about this a lot and I think it is possible to get 300/300 on the VTX 5000 somehow. If anyone out there has done so, or knows how to, please let me know as I think others would also like to know.

Mike Morris wants to know of Amstrad specially boards. Well, there's the PCW for Amstrad PCW 8258 chips, the number for Rose is 0202-788683 on 300/300 baud. There are others, and I'll let you know of them in a week or two, when I've sorted some out.

John Cook looks through this week's new arrivals

## Amstrad CPCs

**Program** *Flash! Type Graphic Adventure* Price £9.95  
**Micro** All CPCs **Supplier** Metabyte House, 60 High Street, Hampton Wick, Kingston Upon Thames, Surrey KT1 4BB

**Program** *Pack in Space Type Arcade* Price £1.95  
**Micro** All CPCs **Supplier** Microtronics, 8-10 Paul Street, London EC2

**Program** *2048 Type Arcade* Price £2.95 **Micro** All CPCs **Supplier** Mastertronic, 8-10 Paul Street, London EC2

**Program** *Aradia Type Adventure* Price £1.95 **Micro** All CPCs **Supplier** Mastertronic, 8-10 Paul Street, London EC2

**Program** *1942 Type Arcade/Emulation* Price £9.95 cassette, £14.95 disc **Micro** All CPCs **Supplier** Edo Systems, Anchor House, Anchor Road, Aldridge, Walsall WA9 6PW

**Program** *Infanter Type Arcade/Emulation* Price £9.95 **Micro** All CPCs **Supplier** Edo Systems, Anchor House, Anchor Road, Aldridge, Walsall WA9 6PW

## Atari XL/XE

**Program** *Cryder Race Type Arcade* Price £1.95 **Micro** Atari 8-bit **Supplier** Mastertronic, 8-10 Paul Street, London EC2

**Program** *Alan Smith And Volume 8 Type Compilation* Price £9.95 twin cassette, £14.95 twin disc **Micro** Alan 800/8005/XL/XE **Supplier** English Software, 1 North Parade, Paternoster Gardens, Manchester M2 1LS

## Atari ST

**Program** *Sing-Pole Type Simulation* Price £19.95 **Micro** Atari ST **Supplier** Amco, 35 West Hill, Dorford, Kent DA1 1JB

**Program** *Smash Type Simulation* Price £24.95 **Micro** Atari ST **Supplier** US Gold, Unit 2 and 3, Westford Way, Westford, Birmingham B6 7AX

**Program** *Jewels of Darkness Type Adventure* Price £19.95 **Micro** Atari ST **Supplier** Bandai, 24 New Oxford Street, London WC1A 1PB

Having been converted to virtually every other format the Level 5/Handy package, *Jewels of Darkness*, has now been released for the Atari ST. Unfortunately, despite Bandai's claims, the graphics in the adventure have not been improved from the version for eight-bit machines. In fact, they are probably the worst illustrations I can recall ever in graphic adventures for the ST.

But in the ST market, £20 for three good adventures represents excellent value for money.

## Commodore 16/Plus 4

**Program** *Line Type Arcade* Price £1.95 **Micro** C16/Plus4 **Supplier** Mastertronic, 8-10 Paul Street, London EC2

**Program** *Antipodal Type Arcade* Price £9.95 **Micro** C16/Plus4 **Supplier** Amco, 35 West Hill, Dorford, Kent DA1 1JB

## No holds barred

Whatever you care to call them — Durgeon's & Dragon's, role-playing games — one game like *The Bard* has taken around almost as long as the microcomputer itself.

But *The Bard* is one of the best. The game universe has been well thought out, lots of magic, character classes, attributes and weapons, lots of graphics and sound effects.

There are some highly original touches too. For example, the game is named for the top player in your adventures, the Bard himself. The bard wishes about playing and singing magical tunes. But when his three or four day-it-had-to-run-for-the-moon-on-Lovers-and-get-some-silver-tips.

There's plenty of exploring

for map-makers, loads of all manner for advertising dragons, types, and battles of blood for barbarians back in the day.

The only thing to be said against it is that it's completely disc-based, as most only do you need a disc but patience, as well, because certain actions involve a lot of disc access. And this is a huge

quibble. *The Bard* looks destined to have classic status for a full review. Best week.

**Program** *The Bard's Tale Type Role playing adventure* Price £14.95 disc only **Micro** Commodore 64/128 **Supplier** Antaresoft, Long Acre, London WC2

## Commodore 64/128

**Program** *Aradit Type Graphic Adventure* Price £9.95 **Micro** Commodore 64 **Supplier** Metabyte House, 60 High Street, Hampton Wick, Kingston Upon Thames, Surrey KT1 4BB

**Program** *Bard vs Reality Type Arcade* Price £1.95 **Micro** Commodore 64 **Supplier** Mastertronic, 8-10 Paul Street, London EC2

**Program** *1942 Type Arcade/Emulation* Price £9.95 cassette, £14.95 disc **Micro** Commodore 64 **Supplier** Edo Systems, Anchor House, Anchor Road, Aldridge, Walsall WA9 6PW

**Program** *Computer Aid 10 Volume 3 Type Compilation* Price £9.95 **Micro** Commodore 64/128 **Supplier** Reza Jolly, 29A, Red Street, Regent, Surrey

**Program** *Captured Type Arcade Adventure* Price £9.95 cassette, £14.95 disc **Micro** Commodore 64/128 **Supplier** American Action, Box 10093, 200 43, Sweden.

**T**he Swedes have no great reputation in the software market and looking at *Captured* from Amstrad Action of Malmö it's not hard to see why.

*Captured* is a platform game with over 100 screens to try your patience. It has everything every other platform game has, moving bits, spikes and things and also some smart bombs which clear all the bad bits off the screen. The graphics are staggeringly unoriginal and a mouthful of silly puns accompanies the whole dismal affair.

Amstrad of your spirit is smooth enough but turning around is slow, usually finally slow. If you're a platform game junkie then here's another title to consider. For one, this program isn't listed as capturing my interest.

**Program ZUG Type Arcade**  
Price £2.99 Micro Commodore 64 **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

**Program World Games Type Simulation** Price £19.99 Commodore 64 **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

## Commodore Amiga

**Program Jewels of Darkness Type Adventure** Price £19.95 Micro Amiga **Supplier** Harddisk, 74 Rye (Oxford Street, London WC1A 1PS).

## IBM PC Compatibles

**Program Simulacron Type Simulation** Price £19.99 Micro IBM and compatibles **Supplier** US Gold, Unit 2 and 3, Holford Way, Holford, Birmingham B6 7AX.

**Program Once On Type Simulation** Price £19.99 Micro IBM and compatibles **Supplier** US Gold, Unit 2 and 3, Holford, Birmingham B6 7AX.

**Program World Games Type Simulation** Price £24.99 Micro IBM and compatibles **Supplier** Epyx/US Gold Unit 2 and 3, Holford Way, Holford, Birmingham B6 7AX.

## Spectrum

**Program ZUG Type Arcade**  
Price £2.99 Micro Spectrum 48/128 **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

**Program Realistic Adventure Type Text adventure**  
Price £19.95 Micro Spectrum 48K **Supplier** Crusader Computing, 18 Hestry Wood Road, Bury, Reading RG6 2RS.

**S**traightforward text adventures, still and in a class in the hearts of many adventurers — "The atmosphere created by text is much more evocative than some rather primitive pictures", is the most commonly heard quote from the programmers.

Unfortunately "atmosphere created by text" all too often means text-Talkies prose, rather than rich evocative description.

*Realistic Adventure* written by a new company, Crusader Computing, does not fall into this trap, alternative video worlds, screen font, and "The Real Adventure" leads westward knowing that he will also have the Old Man now.

However, for the text adventure fan it may well be worth a look. Set around Stonehenge, in a world populated by dragons, and other prehistoric animals, your quest is to find and bring back the legendary Anasaghai fruit from a distant island in order to bring an altar of life.

The game accepts two words per move of a minimum format only, which in these days of *Ultima* and *Levi's* is certainly a bit limiting. Apart from the prehistoric animals, I doubt there's anything remarkably novel about the adventure, but I suspect it'll have your brain working in overdrive if you get into it.

On you, and there's a free glossy wall chart depicting various Stone Age animals — clear a space on your bedroom wall now!

**Program Jewels of Darkness Type Fantasy/Adventure**  
Price £19.95 Micro Spectrum 48K, with expanded 128K version **Supplier** CDC, 14 Langton Way, London SE23 7TL.

**D**on't all glow at once if I'm wrong, but I think that this is the first strategic computer game with a fantasy scenario. You control a unit of the Imperial guards, sent out to quell an invasion of monsters. After selecting your team from the various wizards and warriors available, you proceed to battle, using either physical or magical to position your forces.

There are two versions of the game on the cassette, the 128K version contains three scenarios rather than one, and has a larger playing area.

The map graphics are clear and colourful, and the strategy involved in manipulating your wizards and warriors to defeat the enemy is considerable. Movement points, weapons ranges, and all the usual paraphernalia of strategy games are included.

*Jewels of Darkness* deserves a look by fantasy fans and strategy aficionados though that there is no two player option, the little demon living in your computer is the only opponent available.

# A musical carthorse

I remember when I first acquired a home computer, and would continually sound off about its talents and skills to all available friends and relations. My sister-in-law asked, "But could it do the *Quentis Qwentis*?" (She's like, you see, with depressing speed, so even this is a benchmark of easiness.)

I pondered for a while and said, "I think it could do anagrams." In fact this became my first real programming project (and one I recommend to computer novices). I struggled with problems of stringing and permission for a good while before I came up with some elegant Basic that managed to print all the possible anagrams of a given word.

Even as I congratulated myself, though, I realised that the program would be little use to a Christmas solver. Input a three-letter word, and the six possible variations would come smartly on-screen. Input four letters, and the 24 permutations would print up most efficiently. But nobody whose IQ much exceeds their shoe-size has great trouble with four-letter anagrams.

A five-letter input puts you to the bottom of searching through 120 possible answers, and six letters (when anagrams are only beginning to become tricky) produce 720 permutations. Seven letters multiply those

possibilities by seven - to 5040. And should you be seeking a musical version of 'carthorse', you'd find the elegant answer 'orchestra' hidden among 253,380 combinations that those nine letters could transform to.

My sister-in-law could finish off several whole puzzles (including a couple of alphabetical jigsaws) before any human could read through all that mind-boggling list. So perhaps we should make the computer read it, matching each permutation against a dictionary until it finds one that makes English sense. Maybe, but that sort of brute-force solution seems very clumsy.

The reason for that is it's emphatically not the way that human anagram solvers work. I presented some twelve-year-olds with *Old Man actor* and one week, only three minutes to find the answer (*Clod Amador*), or, at least, his real cousin. I had certainly hadn't solved methodically through the six thousand million (themselves) possible combinations of those 12 letters.

How did it do it is probably a mystery to him. Most of us feel that at one moment the letters seem intractable, the next the answer is obvious. Possible syllables shift about in our minds, as we use our sense of the way words work and instinctively ignore most of the variations (*Shedwacker*, *Shedwacker*, 'old-

weather'...) that my simple-minded computer program wastes so much time on.

Douglas R Hofstadter (*The Godel Escher Bach* author who has said things about Artificial Intelligence using in many interesting and unexpected directions) has written: "The anagram problem is one that exemplifies manifestations of thought that AI people have not explored."

How do those letters swirl among one another, fluidly and instinctively making and breaking alliances? Glomming together, then coming apart, almost like little biological objects in a cell... It is obvious, is more related to creativity and spontaneity than it is to logical deductions, but that does not make it - or the mode of thinking that it represents - any less worthy of attention.

A program that could simulate one's sense of English word-structures, that could find likely syllables and try to seek them on to others, could discriminate between promising and unpromising combinations of letters, could leap from a partial syllable to a sense of the entire word, and above all could recognise a satisfying solution when it found one - that would be a real step towards Artificial Intelligence. I wonder how it'd compare with my sister-in-law!

George Simmons

## NEXT WEEK

### SPECIAL SUPPLEMENT

#### Buyers guide to peripherals

Over the next three weeks Popular will be publishing comprehensive guides to the best buys in peripherals, monitors and software.

By the end of the series, your Christmas list (yes, it's nearly that time of year again) should be complete, and you can rest secure in the knowledge that there will be no excuse for getting dull presents this time.

Next week it's peripherals. All you ever wanted to know about the choices of printers, mice, monitors, and modems on the market, the best and brightest value for money add-ons we could find.

#### Hardware

The Acorn Master Compact - the latest in Acorn's series based on the BBC B.

#### Chess

More news from the world of computers and chess from Columbia author Martin Bryant.

# Fairlight

Chronicles of the Land of Fairlight  
2. Trail of Darkness

THE EDGE

## The Epic continues...

Fairlight 1 (The Light Devotion) inspired virtually every pasted here even. Now in this second part of the epic, Chronos has followed the two long-term masterpieces and will be disappointed. Trail of Darkness is probably the best of the 12th-century games, possibly the best of the 12th-century, and features some of the best of development and improvement to the revolutionary 12th-century's content.
